Version 1.0
October 2026

Chain Reaction

A card with Chain Reaction that robattles a Leader attempts to damage that Leader twice.

- If the attacked Leader levels up after the first damage, its Armor will be updated immediately. This can result in the second damage missing if the attacker's Power isn't high enough.
- If a card with Chain Reaction gets a second instance of Chain Reaction, it will still attempt to damage Leaders only twice.
- The extra damage caused by Chain Reaction is damage by robattle, not damage by effect.
- If a Medabot with Chain Reaction is destroyed by robattle against a Leader, the second damage will happen after it is destroyed, using the Power it had at that moment.
- If a card robattles a Leader by using the Laser skill, Chain Reaction will still work.
- There are variations of Chain Reaction such as Triple Chain Reaction and Zodiac Chain Reaction. If an effect asks if a card has Chain Reaction, these also count.
- If a card has multiple Chain Reaction skills, always use the one that damages the most times.

Destroyer

A card with Destroyer that robattles a Medabot always attempts to destroy the Medabot, regardless of the card's Power or the Medabot's Armor.

- The destruction caused by Destroyer is destruction by robattle, not destruction by effect.
- Destroyer does not guarantee destruction if another effect prevents it or cancels it. For example, a non-Melee Medabot will still not destroy a Medabot with Melee Mastery, even if it has Destroyer.
- If the card with Destroyer already had enough Power to destroy the opposing Medabot, the Destroyer skill is redundant. It will not attempt a second destruction.

Evasion

A triggered skill that means "When you pass the turn ► Cool this card."

- If a card is Stopped until your opponent's turn, Evasion will not work. Even though you've passed the turn, it's still your turn until skills like Evasion have finished resolving.
- If multiple cards with Evasion are on your field, they will all trigger at the same time, and you choose the order in which they'll become cooled.

Gravity

Leaders/Medabots with Gravity can also manually attack a cooled Medabot if the latter has less  Power.

- The  Power of both cards are compared when the attack is declared. If their Powers change during the robattle, it will continue as normal.
- Cards can have negative Power when reduced by effects. For example, a Medabot with Gravity and  Power 0 can attack a cooled Medabot with  Power -10.

Guard

A triggered skill that means "When another card on your field is attacked, you may heat this card ► This card blocks the attack."

- To block an attack means the blocking card is now the attacked card, and the previously attacked card is no longer involved in the robattle.
- If multiple cards on your field have Guard, you may play as many Guard skills as you wish during a single attack. Only the card that blocked last will remain in the robattle.
- A card's Guard skill will not trigger if it was declared as the attacked card.
- Cards can never block their own attacks.
- There are variations of Guard such as Melee Guard. If an effect asks if a card has Guard, these also count.

Laser

A card with Laser that is attacking a Medabot and destroys it by robattle will also attempt to damage the Leader on the same field.

- Laser does nothing when the card with it is attacked.
- If the Medabot's destruction is prevented or canceled, Laser will not work.
- The card with Laser still needs to have enough  Power to be able to damage the Leader by robattle.
- Using the Laser skill is not optional.

- Having a second instance of Laser will not make a card attempt to damage the Leader more times.
- The damage caused by Laser is damage by robattle, not damage by effect.
- If a Medabot with Laser is destroyed by robattle, the damage to the Leader will happen after both Medabots are destroyed, using the  Power it had at that moment.
- If a Leader/Medabot robattles a Leader by using the Laser skill, Chain Reaction will still work.
- Laser will damage the Leader on the same field as the attacked Medabot. If an effect makes an opponent's card attack their own Medabot, it can end up damaging its own Leader.
- If your Leader has 15 damage and Laser and destroys an attacked Medabot by robattle but is also damaged in the same robattle, you will lose the game before it attempts to damage your opponent's Leader.

Mastery

Mastery will always have an associated characteristic. A card with a Mastery skill cannot be destroyed or damaged by robattle against a Medabot that does not match the characteristic.

- Mastery will not prevent damage or destruction by Leaders.
- If an effect asks if a card has Mastery, any variation counts.
- If a card has multiple Mastery skills, it cannot be destroyed/damaged unless the robattled Medabot matches all the qualities at once. For example, a Medabot with both Range Mastery and Melee Mastery can only be destroyed by a Medabot that is both  Range and  Melee.

Medaforce

"Medaforce ► [Effects]" means "You can destroy this card ► [Effects]" and "This skill cannot be canceled."

- Medaforce is a manual skill that only appears in level 3 Medals.
- After destroying a level 3 Medal, your Leader will go back to level 2 and have  Power/  Armor 30. This is the only way to reduce a Leader's level. It will be unable to go back to level 3.
- The damage the Leader has will not change.
- Chained skills of a Medaforce skill are also considered Medaforce skills and cannot be canceled.

Melee Guard

A triggered skill that means "When another card on your field is attacked by a  Melee Medabot, you may heat this card ► This card blocks the attack."

- See Guard for more info.

Once per turn

A skill condition that means “if you have not attempted to play this skill this turn”.

- If a “once per turn” skill was canceled, it doesn’t count as having been played, but you still cannot play it again.
- If you are about to play a “once per turn” skill, and the same skill triggers again, you cannot attempt to play it again, even though you haven’t gotten to resolve it yet.
- If a card that already used a “once per turn” skill leaves your field and comes back, the skill can be played again.
- If a card that already used a “once per turn” skill is moved to your opponent’s field, they can play the skill.
- The condition applies to an individual card. If you have multiple copies of the same card, each “once per turn” skill acts independently.

Propulsion

A Medabot with Propulsion can also manually attack the turn it was played by the turn player.

Protection

A Medabot with Protection cannot be targeted by your opponent.

- Players target cards only when a text explicitly uses the word "target". Other effects will still work against cards with Protection.
- Protection only affects your opponent. You can still target cards on your own field with Protection.
- Protection doesn't affect what cards can be attacked.
- Protection is checked when a player tries to target a card. If a player played a skill and targeted a card without Protection, and the card later gains Protection, the skill will still resolve as normal.

Recycle

A triggered skill that means "When this card is destroyed ► Move it from your trash to your Medawatch."

- This skill will track the card as it moves from your field to your trash. If the card does not go to your trash after being destroyed or leaves your trash before the skill can be played, the effect won't work. Even if the card left the trash and went back again, it won't work.
- If an opponent's card is on your field and it is destroyed, Recycle will trigger for you, but it will not work, as the card is in their trash, not in yours. The card won't go to either Medawatch.
- Recycle will never work on tokens. When destroyed, they are removed, they don't go to the trash.

Scrap

"Scrap ► [Effect]" means "When you play this card, you may destroy 1 Medabot/Medafighter on your field ► [Effect]"

- You can destroy the same card that is using the Scrap skill.
- If paying the cost of a Scrap skill triggers a skill such as "When this card is destroyed", that skill will be played before the Scrap skill.
- "If scrapping a ... card" means "If you destroyed a ... card to pay the cost of this Scrap skill".
- When determining the characteristics of a scrapped card, you check how the card was at the moment it was destroyed, including all the effects that were changing its characteristics.
- Destroying your own card to pay a cost is immediate. It doesn’t mark the card for destruction or create a checkpoint.

Stop

A game action (not a skill). If a player Stops a card, that card will not be able to attack, block or become cooled until that player's next turn.

- The duration of the Stop effect depends on the player who did the action, not on the affected card.
- While the effect is active, the card is considered to be "Stopped".
- "Can't" beats "Can". While a card is Stopped, none of the mentioned actions can happen, not even by another card effect.
- A Stopped card can be Stopped again. This matters for skills such as "When you Stop a card", or if different players Stop the same card and extend the duration.

Support

A manual skill that means "You can heat this card and target 1 Medabot ► The target gets  +10 for the turn."

- You can target the same card that is using the Support skill (if it is a Medabot).
- While the effect is active, the target is considered to be "Supported", even if the card with the Support skill leaves the field or loses the skill.
- A card "Supports" a Medabot when you play its Support skill targeting that Medabot (and it is not canceled). Skills such as "When this card Supports a Medabot" trigger at this time.
- A Medabot is "Supported" if you played a Support skill targeting it this turn (and it was not canceled).

Triple Chain Reaction

A Leader/Medabot with Chain Reaction that robattles a Leader attempts to damage that Leader three times.

- See Chain Reaction for more info.

Zodiac Chain Reaction

A Leader/Medabot with Chain Reaction that robattles a Leader attempts to damage that Leader once for each [Zodiac] card you played this turn.

- This skill counts all [Zodiac] cards you have played during the turn, even if they are not on the field anymore, and even if the card with Zodiac Chain Reaction was not on the field at the time.
- If a [Zodiac] card's play was canceled, it will not count.
- If the card with Zodiac Chain Reaction was played this turn, it will count itself too (if it is a [Zodiac] card).
- If you have played no [Zodiac] cards this turn, the card with Zodiac Chain Reaction will still damage Leaders at least once.
- Medaparts don't share the qualities of its Medabot. If you played a Medapart, that doesn't count as playing a [Zodiac] card, even if the main side is a [Zodiac] Medabot.
- See Chain Reaction for more info.

Zodiac Cycle

Zodiac Cycle will always have a number. "Zodiac Cycle N" means "Before you pay for this card, you can instead pay (N). If you do, when you pass the turn ► Destroy this card."

- When playing a card through Zodiac Cycle, effects that increase or reduce a card's cost will still work on the new cost.
- When playing a card by effect (and thus paying no cost), there's no option to use Zodiac Cycle.
- Using Zodiac Cycle creates a delayed triggered skill. This skill is not a skill of the played card and will trigger even if the card loses its skills.
- The delayed triggered skill will only trigger once. If the card is somehow not destroyed, it will not trigger again when you pass the turn in the future.
- If the card leaves the field and comes back, the effect will not destroy it. If the card is played from the field as a Medapart, it will count as having left the field (by temporarily going to the transport zone), and the effect will not destroy it as a Medapart.
- If you play multiple cards through Zodiac Cycle in the same turn, they will all trigger at the same time, and you choose the order in which they'll be destroyed. The order in which they were played does not matter.
